

## TRANSPORTATION MANAGEMENT SOLUTIONS | TMS 3.X

### Trusted Distribution Solutions for small parcel, LTL and TL Processing

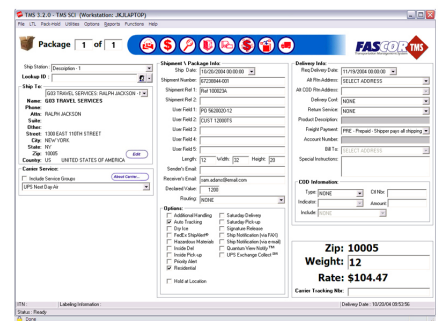

#### Product Overview

Competing successfully in today's ever-changing marketplace requires companies to achieve strategic advantages over their competition. One key approach is for companies to improve their logistics and distribution capabilities, resulting in improved customer service and better control over inventory, transportation and order-sourcing costs.

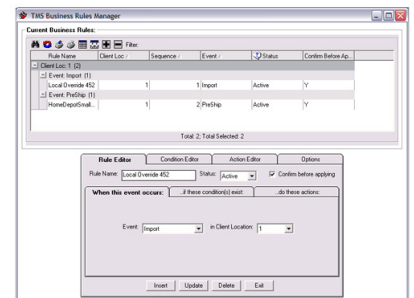

TMS 3.X™ was developed with this approach in mind. TMS is a proven transportation management system for today's demanding business applications, enabling companies to ship customer orders quickly, easily, and with 100% accuracy.

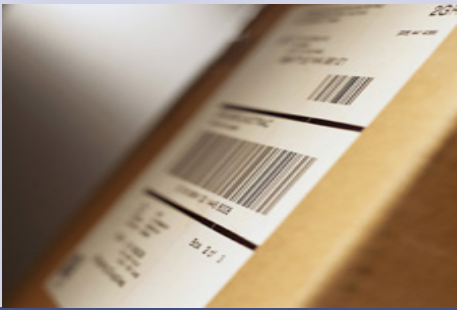

#### Benefits

- One system for multiple carriers simplifies shipping process and delivers maximum resource utilization
- Carrier certified, TMS insures carrier compliance & eliminates carrier charge-backs while facilitating best and least cost selection of services through Rate Shopping.
- Business Rules Manager (BRM) allows customers to implement unlimited rules to enforce internal policies, routing instructions and or customer requirements
- Open, powerful and state of the art design shortens integration time & simplifies user training
- N-Tier Architecture provides a highly scalable solution capable of supporting an unlimited number of locations and users
- Bar Code and other auto-id technology reduces data errors, processing time & paper work while improving shipping accuracy
- Improved customer support through on-line shipment information via built in tools and browser based inquiry functions including Crystal Reports™ based reporting.
- Advanced Application Programming Interfaces (EEAPI) allow TMS to be fully integrated with other business systems including ERP and Warehouse Management. TMS EEAnybody allows TMS to communicate to virtually any system.

TMS's shipping screen (*above*) provides users the tools to ship virtually any package or shipment while TMS Business Rules Manager (*below*) allows users to configure an unlimited set of business and shipping rules for TMS to enforce without additional user intervention.

# Flexible, Powerful and Real Solutions for Transportation Management

## TMS 3.X

## ■ Product Capabilities

### Carrier Compliance

TMS is a carrier certified solution providing maximum flexibility to leverage various shipping options. Users can depend on TMS for proper shipment labeling, documentation and end of day electronic communication with the respective carriers. With TMS, there's no reason to have multiple shipping solutions anymore.

### Advanced Automation

TMS provides advanced automation capabilities, including integration with in line sortation systems and print and apply systems. System API's may also be used for deployment in "Black Box" implementations.

### Reporting & Query Options

TMS delivers a variety of reporting and inquiry tools to enable system users, including customers, to access and leverage the wealth of data available. Standard and custom reports are supported through TMS's Crystal Reports module. TMS also includes a robust query building tool that allows users to find exactly the set of data they need, all of which can be exported in standard file formats like Excel (CSV).

### International Documentation & Haz Mat Processing

For companies that ship to international destinations or that ship hazardous materials, TMS delivers all of the most recent carrier-approved options including required documentation and labeling for both types of shipments.

### FASCOR, Inc.

11260 Chester Rd. Ste 610  
Cincinnati, OH 45246

Phone: 513.421.1777  
Fax: 513.421.1191

### Scalability & Configurability

TMS can be configured as a stand-alone, multi-station, networked, or unattended system. From a single location to enterprise requirements using Windows Terminal Services, TMS can meet the application.

### System Integration

TMS offers an unmatched set of communication and integration options to meet virtually any challenge. COM, XML, TCP-IP, ODBC and simple file transfers are all available through TMS to create seamless, and in most cases, real-time bridges to other internal system regardless of their platform or purpose. If a requirement stretches the standard capabilities of TMS, FASCOR's Professional Service Team can build a custom interface based on client requirements.

## ■ Specifications

### System Compatibility

- Windows XP/7
- Microsoft SQL Server

### Carrier Support

- UPS™
- FedEx™
- United States Postal Service™
- Less Than Truck Load (LTL)
- Regional & Local Carriers
- Parcel Consolidators

### Host Connectivity

- COM
- TCP-IP
- XML
- Batch File
- ODBC

### Printing

- Carrier Labels for Zebra and Laser printers using JPG/WMF formats
- International Documentation (PDF)
- Carrier Shipping Manifests (PDF)
- VICS Bill of Lading (PDF)
- Standard & Custom Reports (PDF)

### Features

- System "Ship To" Address Book
- System user management & security

- Advanced Shipment E-mail Notification
- Web Enabled Desktop Shipping and Inquiry
- Rate Shopping with Least Cost Carrier Selection
- Carrier In-Transit Data
- Pack And Hold
- User definable Carrier Service Groups
- COD, AOD, Hazardous Materials
- In-Line Manifesting and Sortation
- Bulk Batch Processing
- Delivery Confirmation Auto Tracking (Auto Track)
- User configuration management tools (location Manager, Discount Manager, more)
- Integrated LTL processing with unlimited tariff support (SMC Rateware)
- Inquiry & Search Application for advanced query and data exporting needs
- Optional Address Verification and Cleansing using CASS certified database
- Multi Tier Discounting with "Preferred Carrier" logic and selection

**Nationwide Technical Support including 7x24 plans.**
